A man with a beard and glasses, wearing a blue shirt, is seated in the background, slightly out of focus. In the foreground, there is a large group of brown stuffed monkeys, with one in sharp focus in the center. The scene is indoors, with a window and some foliage visible in the background.

# How do we store data?

## Database

- Tables of data
- Columns of different types
- Good for:
  - Complex Data
- Use:
  - SQLite.net PCL

# How do we store data?

Database

File System

- Persistent Files
- Flat file system
- Read/Write with IO
- Good for:
  - Config Files, Embedded Data, Static Complex Settings
- Use:
  - PCL Storage

# How do we store data?

Database

File System

Preferences

- App Specific Settings
- Key-Value Pairs
- Good For:
  - App Config, user preferences/settings, small customizations
  - Simple data

# iOS Preferences

- UserDefaults
  - `var defaults = UserDefaults.StandardUserDefaults;`
- Get:
  - `var user = defaults.StringForKey("username");`
- Set:
  - `defaults.SetString(value, "username");`
  - `defaults.Synchronize();`

# Android Preferences

- SharedPreferences

- `var prefs = PreferenceManager.getDefaultSharedPreferences(Application.Context);`

- Get:

- `var user = prefs.getString("username", string.Empty);`

- Set:

- `prefsEdit = prefs.edit();`
  - `prefsEdit.putString("username", value);`
  - `prefsEdit.commit();`

# Android Preferences (easy settings screens)

```
<PreferenceCategory android:title="@string/category_notifications_preferences">
    <CheckBoxPreference android:key="ProgressNotifications"
                        android:title="@string/notifications_progress"
                        android:summary="@string/notifications_progress_summary"
                        android:defaultValue="true" />
    <CheckBoxPreference android:key="AccumulativeNotifications"
                        android:title="@string/notifications_accumulative"
                        android:summary="@string/notifications_accumulative_summary"
                        android:defaultValue="true" />
</PreferenceCategory>
```

# Windows Phone Preferences

- IsolatedStorageSettings
  - `var prefs = IsolatedStorageSettings.ApplicationSettings;`
- Get:
  - `var user = prefs["username"];`
  - `**Should probably check .Contains("username")`
- Set:
  - `if (prefs.Contains("username"))`
    - `prefs["username"] = value;`
  - `else`
    - `prefs.Add("username", value);`

# Windows RT Preferences

- `ApplicationDataContainer`
  - `var prefs = ApplicationData.Current.LocalSettings;`
- `Get:`
  - `var user = prefs.Values["username"];`
  - `**Should probably check .Contains("username")`
- `Set:`
  - `if (prefs.Values.ContainsKey("username"))`
    - `prefs.Values["username"] = value;`
  - `Else`
    - `prefs.CreateContainer(key, ApplicationDataCreateDisposition.Always);`
    - `prefs.Values["username"] = value;`

# A Better, More Cross-Platform Way!

- Settings Plugin for Xamarin and Windows!

<https://www.nuget.org/packages/Xam.Plugins.Settings/>

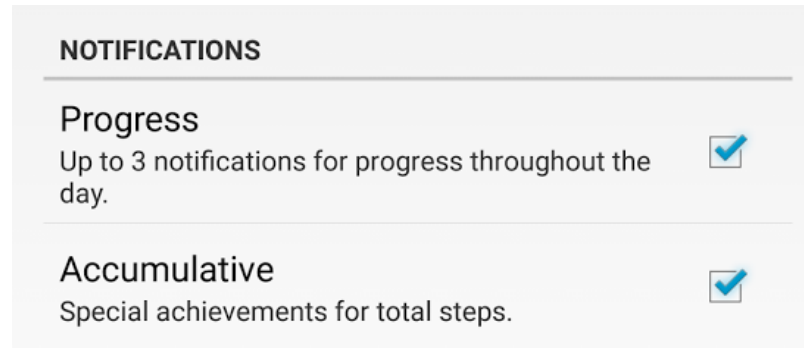

# The API: ISettings

- Supports:
  - Bool, Int32, Int64, String, Single (float), Guid, Double, Decimal, DateTime
- Get:
  - `var name = AppSettings.GetValueOrDefault<string>("username", string.Empty);`
- Set:
  - `AppSettings.AddOrUpdateValue<string>("username", value);`

# Under the hood:

- Uses the Native Preferences!!!
- UserDefaults
- SharedPreferences
- IsolatedStorageSettings
- ApplicationData
- NO json or xml files!

# Totally Support Android Preference Screens!

```
<PreferenceCategory android:title="@string/category_notifications_preferences">
    <CheckBoxPreference android:key="ProgressNotifications"
                        android:title="@string/notifications_progress"
                        android:summary="@string/notifications_progress_summary"
                        android:defaultValue="true" />
    <CheckBoxPreference android:key="AccumulativeNotifications"
                        android:title="@string/notifications_accumulative"
                        android:summary="@string/notifications_accumulative_summary"
                        android:defaultValue="true" />
</PreferenceCategory>
```
